INTRODUCTION

ASBS Newsletter Index

Part 1 — Issued December 1991

This is the first part of a consolidated index to all issues of the society's *Newsletter*, which council decided would be the most practical means of accessing the considerable amount of information that this periodical contains. The index has been compiled over a number of years by several members of the society. To all of those contributors we are very grateful, and council hopes that you will find this a very useful compilation. Actually, it is compulsory for all members to use it at least once a month!

The data for this first part of the index are in three groups:- taxonomic names (including latin binomials and trinomials, as well as all higher categories), personal names (including authors, as well as references to particular people), and subjects (including titles of articles, as well as particular topics).

Most of the data from the second two categories from issues 1-21 were extracted by John Jessop in Adelaide; and this part of the index was first distributed to interested members of the society at the end of 1979 (see *ASBS Newsletter* 19: 8 and 21: 2). Bill Barker in Adelaide then compiled further information from these issues, plus the rest of the data in these two categories from issues 22-30. Issue 30 was the last of the old-style *Newsletter*, and since that time each editor has compiled an annual index to the titles and subjects.

Council then decided to compile a thorough index to the scientific plant names from issue 1 through to the present. This has been done by Kirsten Cowley in Canberra, and the data are now maintained as an up-to-date computer database.

This first part of the index includes all of the data from issues 1-30 inclusive, covering the period from 1974 to early 1982. The data were checked by Louisa Murray, and the final editing was by David Morrison.

The remainder of the index, covering the period of the *Newsletter* in its modern format, will be included with further issues of the *Newsletter*. The data from these later issues will be indexed by taxonomic names, authors, and subjects.

The Society

The Australian Systematic Botany Society is an incorporated association of over 300 people with professional or amateur interest in botany. The aim of the Society is to promote the study of plant systematics.

Membership

Membership is open to all those interested in plant systematics. Membership entitles the member to attend general meetings and chapter meetings, and to receive the *Newsletter*. Any person may become a member by forwarding the annual subscription to the treasurer. Subscriptions become due on January 1 each year.

The Newsletter

The *Newsletter* appears quarterly, keeps members informed of Society events and news, and provides a vehicle for debate and discussion. In addition, original articles, notes and letters (not exceeding ten published pages in length) will be considered.

Contributions should be sent to one of the editors at the address given below. They should preferably be submitted as an unformatted word-processor or ASCII file on an MS-DOS or Macintosh diskette accompanied by a printed copy, or as two typed copies with double-spacing.

The deadline for contributions is the last day of February, May, August, and November.

All items incorporated in the *Newsletter* will be duly acknowledged. Authors alone are responsible for the views expressed, and statements made by the authors do not necessarily represent the views of the Australian Systematic Botany Society Inc. *Newsletter* items should not be reproduced without the permission of the author of the material.

Notes

ASBS annual membership is \$22 (Aust); full-time students \$12. Please make cheques out to ASBS Inc., and remit to the treasurer. All changes of address should be sent directly to the treasurer, as well.

Advertising space is available for products or services of interest to ASBS members. Current rate is \$100 per full page, \$50 per half-page or less. Contact one of the *Newsletter* editors for further information.
